INTEGRATED SCIENCE AND TECHNOLOGY
COLLEGE OF SCIENCE AND TECHNOLOGY
LEADING TO THE DEGREE OF MASTER OF SCIENCE (M.S.)

PURPOSE
The Masters in Integrated Science and Technology (ISAT) is an interdisciplinary program that emphasizes applications of chemistry, computer science, industrial technology, mathematics, and physics in a career enhancement degree. This degree has been devised to meet the specific needs of students attending regional universities and desiring technical employment. This degree will prepare students for the workplace by giving them experience in applying their knowledge of mathematics and science to projects of interest to business and industry. Individuals with experience and training in technology will gain a deeper understanding of the science and mathematics used in their fields. Students will learn these problem-solving skills through a core of interdisciplinary project-oriented courses that will extend and broaden training in each of the academic areas.

Objectives of the Program: Students who complete the ISAT degree at Southeastern Louisiana University will be able to:

Integrate information and concepts across different scientific and technical disciplines.
Apply specialized knowledge from chemistry, computer science, industrial technology, mathematics or physics to solve problems that are critical to future growth of local business and industry.
Work effectively with people who possess various educational and experiential backgrounds.
Use appropriate technology in communication, information and knowledge management, modeling, forecasting, and decision making.

Students in the ISAT program will take a core of interdisciplinary, project-oriented courses that will extend and broaden their training in science and technology. In the course of their studies, these students will learn to use current problem-solving approaches from mathematics, chemistry, physics, computer science and industrial technology to solve problems from a wide variety of business and industrial settings.

REQUIREMENTS FOR ADMISSION
Applicants to the ISAT program must have completed an undergraduate degree program and have earned at least 30 semester hours in any combination of chemistry, computer science, industrial technology, mathematics, or physics to enter the program. Applicants must have a cumulative undergraduate GPA of at least 2.75, and a combined Verbal and Quantitative Score on the Graduate Record Exam of at least 850. In addition to GRE score, applicants must submit a letter of application (two), letters of recommendation and transcripts of previous undergraduate or graduate work.

ACADEMIC STANDARDS POLICY
1. Any student in the ISAT program who earns a grade less than a “C” in any course in the ISAT curriculum or who earns more than one (1) “C” in the curriculum must present a written appeal to the Program Coordinator no later than 10 working days prior to the beginning of the next full semester. An Academic Standards Committee will review these appeals. This appeal should address the student’s perception of the reasons for this grade and the reasons why he/she should be allowed to repeat the course and remain in the ISAT program. Failure to submit the written appeal according to the above timelines will be interpreted by the Committee as a declaration that the student does not wish to continue in the program.
2. The Committee will meet with the student and respond to the student’s appeal in writing before the beginning of the next full semester.
3. The Committee may invite the instructor(s) of the course and/or any other personnel who may have supervised components of class work to attend the appeal for information purposes. There will be no other counselor present for the discussion.
4. The Committee will make one of the following recommendations to the students and submit a copy to the Dean of Research and Graduate Studies.
   a) The student may repeat the coursework with no ancillary conditions or restraints.
   b) The student may repeat the coursework but under certain specified conditions i.e. restricted course load, tutor or mentor help, etc.
   c) The student will no longer be allowed to continue in the ISAT program.

DEGREE REQUIREMENTS
The generalist track ISAT degree requires a total of 33 semester hours consisting of 6 applied science seminars, 12 hours from the core courses, 6 hours in their area of concentration, 3 hours in courses that are cross-listed with their area of concentration, and 6 hours of research project or thesis work.

The specialist track ISAT degree requires a total of 36 semester hours consisting of 3 hours of the first applied seminar course, 9 hours from the second applied seminar course and the core course, 18 hours in their area of concentration, and 6 hours of thesis work.

Proficiencies: One of the most positive characteristics of the ISAT program is the diversity of the students. So that all students in the program can succeed, there will be provided for the students a web-based review of introductory material in each of calculus, chemistry, computer science, industrial technology, and physics. All students admitted to the program will be asked to demonstrate proficiency in calculus, chemistry, computer science, industrial technology, and physics during their first year in the program. Proficiency will be comparable to the level of knowledge of having passed an introductory undergraduate course or courses in the area.

CURRICULUM FOR THE MASTER OF SCIENCE IN INTEGRATED SCIENCE AND TECHNOLOGY

GENERALIST TRACK

The core courses introduce elements that will pervade the entire program and unify, or connect, the components of the curriculum, and will be given up to one semester to make improvements.

Seminars. Students deemed to be making insufficient progress toward their degrees will be notified of the problems identified by the committee, and will be given up to one semester to make improvements.

Research project topics will be chosen during the student's first year in the program, but after completion of the Applied Science Seminar. Each Degree Committee will consist of two faculty members from the student's major area, one faculty member from an area also involved in the degree, and a representative from business or industry. A student’s Degree Committee will be selected during the student’s first semester in the program. Research project topics will be chosen during the student’s first year in the program, but after completion of the Applied Science Seminars. Students deemed to be making insufficient progress toward their degrees will be notified of the problems identified by the committee, and will be given up to one semester to make improvements.

Scientific Computation Concentration: It is a concentration in the specialist track. This concentration involves Chemistry, Computer Science, Mathematics and Physics. For the electives, the students need to take six out of the following courses: SC 671, SD 672, SC 673, SC 674, SC 675, SC 676, SC 677, and SC 678.
