

Dwarf Palmetto: *Sabal minor*

The Dwarf Palmetto grows up to 3 ft. in height, with a trunk up to 1 ft. in diameter. It is a fan palm with a bare petiole (leaf stalk) terminating in a rounded fan of numerous leaflets.

Dwarf Palmetto is one of about 14 species of palmetto palms. It is native to the southeastern United States. Although it is mainly found in the southern states, it is one of the only palms that can stand somewhat cooler temperatures, and can be found as far north as southcentral Pennsylvania.
